WHAT IS "THE PROTECTOR" PACKAGE?
The Protector Package is a fully comprehensive accounts receivable and inventory collateral monitoring package designed for:

- The Asset Based Lender not wanting to establish a complicated monitoring infrastructure which is fairly labor and capital intensive, usually including:
- Extensive human resources
- Computer hardware and maintenance
- Computer software and maintenance
- $\quad$ Space rental and related overhead
- The Asset Based Lender who wishes to lend in the Asset Based Lending environment, but only on a limited basis.
- ABLC will also provide field audit services for the lender if so desired. Such services start at $\$ 1,000$ per man day and done under a separate agreement.

## HOW DOES THE PROTECTOR WORK?

- The Protector is Excel driven, with download potential via email to the lender.
- It produces comprehensive collateral numbers and statistical data extrapolated from borrower submitted documents to be used by the lender, to intelligently manage the ABL portfolio. Such information is produced daily, weekly, or monthly, as the lender desires.
- It computes for the lender on each account, the following data:
- Monthly interest calculations
- Monthly yield calculations, factoring in such variables as float days, commitment and renewal fees, audit fees, service fees, etc.
- Monthly return on asset calculations

## Note:

Credit underwriting, account management, UCC lien filings, renewals, loan funding, receivable collections and all other credit functions are the responsibility of the lender.

## WHAT IS THE COST FOR THE PROTECTOR SERVICE?

- Fees start at $0.125 \%$ monthly on the monitored combined collateral balances and can be impacted upwards by such things as:
- $\quad$ Number of agings per borrower
- Multiple subsidiaries borrowing under loan

## "THE PROTECTOR" - COLLATERAL MONITORING PACKAGE

## INTRODUCTION

The operations area formerly referred to as the "back room" of the asset based lending area, represents an integral part of the credit control function of the asset based lender.

Because the nature of asset based lending makes it inherently vulnerable to fraud, the operations area's function becomes the first line of defense for the lender.

In a properly structure asset based lending area, all supporting collateral documentation flow through the operations area for review and authentication. The operations person's function is very micro in nature and usually very, very paper intensive. ABLC's personnel in this area have the ability to wade through mounds of paperwork on a daily, weekly or monthly basis and spot irregularities.

Documentations that flow through the Protector program would include but are not limited to the following:
(a) Copies of customers' invoices and supporting shipping documentation (assignments)
(b) Copies of customers' credit memorandums
(c) Cash remittance reports including checks received from customers
(d) Accounts receivable agings
(e) Accounts payable agings
(f) Borrowing base reports
(g) Inventory listings

The Protector allows for the same personnel working on the same accounts continually, to familiarize them with specific customers. This in the long run, aids the operations person in spotting irregularities.

Personnel are immediate in reporting irregularities to lenders, so that necessary action can be taken expeditiously.

While some functions of The Protector are monthly versus daily, they include the following:
(a) Verifications
(b) Reconciliations
(c) Agings review
(d) Review of collateral documentations
(e) Review of receivable cash remittances
(f) Review of accounts payable aging
(g) Review of inventory reports
(h) Ineligible calculations
(i) The maintenance of data files and trend cards

## DEFINITIONS OF FUNCTIONS

(a). Verifications

This process involves the contacting of a borrower's debtor in attempting to determine the validity of receivables pledged as collateral support.
Verifications are usually done on a written basis with an attempt to cover the entire aging in a year's time. Telephone verifications are used in cases where irregularities arise and immediate answers are important.

Written verifications are usually sent monthly with a second notice following the first attempt by ten days. Unresolved issues are brought to the account manager's attention and forwarded to the lender's audit department for follow-up.

## (b). Reconciliations

This involves the process of matching the borrower's month-end agings on debtors to the lenders statements. This process is designed to catch unreported items such as credit memorandums, write-offs, etc., in addition to making sure there has been no double reporting of invoices assigned to the lender.

## (c). Review Agings

The view of agings serves the following purposes:
i. Monitor the movement of accounts across the agings. This is done by examining consecutive months' agings side by side and checking the movement of individual accounts.
ii. To review concentrations of debtors and monitor undue build-up in any one account. This exercise also allows the lender to monitor on an ongoing basis, the strength of the customer base.
iii. To calculate the ineligible accounts. While some customers will calculate and remit ineligibles, it is the responsibility of the Protector's personnel to check the veracity of these figures.
iv. To compile on a continuing basis, comparative aging spreads to monitor aging condition and match with debtor turnovers.
(d). Reviewing Invoices/Shipping Documentation

This procedure allows the operations department to monitor invoices as to amounts, dates, numerical sequence and to compare to shipping document to determine if:
1). Shipping is timely
2). Pre-billing and pre-assignment exist

Operations personnel sometimes find it necessary to telephone verify individual invoices, if the circumstances suggest that this step is needed.
(e). Reviewing Remittance Reports

The reviewing of remittance reports lends itself to ascertaining that all receivable
proceeds are being sent to the lender to reduce the credit facility.

## (f). Reviewing Accounts Payable Agings

This function serves primarily as a means of identifying contra accounts where an ineligible receivable should be established. The condition of the aging will also serve as an indicator of haw the company is paying its vendors.
(g). Reviewing Inventory Reports

The review of inventory reports serves several functions, namely:
i. A monitoring of inventory composition, i.e., raw materials, work-in-process and finished goods.
ii. A calculation of ineligible inventory.
iii. To determine if inventory is stored at any new locations that the lender might not be aware of.
iv. A monitoring of inventory levels.
v. A comparison of inventory levels to insurance coverage amounts.

## (h). Ineligible Calculations

This exercise is geared towards calculation of a borrowing base to determine funds
availability. A comparison is then made to the borrower's calculation to determine discrepancies if any.

## MAINTENANCE OF DATA FILES AND TREND CARDS

The Protector extrapolates and compiles statistical information from incoming documentation, to aid the lender in the intelligent management of the borrower.

It secures statistics that allow the lender to be able to analyze the following trends on a monthly basis:
a). Accounts receivable aging spread comparison
b). Concentration account balances
c). Receivable turnover and collection trends
d). Sales and dilution levels
e). Historical ineligible percentages
f). Verification response trends
g). Inventory composition trends
h). Inventory ineligibility trends
i). Loan availability trends

The analysis of these trends by Protector personnel and the lender's account management staff, aids in the management of borrowers and the detection of any deteriorating collateral trends.

## KEY COLLATERAL INDICES REVIEWED BY THE PROTECTOR

## Preamble

The purpose of this analysis is to encourage the Collateral Analyst to be proactive by looking at key data and attempting to connect the dots and determine if the borrower is deteriorating or improving.

## Accounts Receivable

1) Comparative aging spreads on a rolling 13 month basis with emphasis on the comparable period for the previous year. Protector performs a vertical and horizontal analysis looking for:
a) Shifting percentages between aging buckets. Closely scrutinizes not only the past due bucket but the critical column bucket.
b) If working with an invoice date aging, compares the current bucket with sales for the corresponding month.
c) A review of Concentration Debtors and comparing their performance to the general AR population. If there are substantial delinquency issues with concentrations then causes are pursued.
d) Tests movement of aging buckets and also consistency in presentation of aging.
e) Compares aging movement to AR monthly and year-to-date turnover trends.
2) Accounts receivable statistics focusing on:
a) Turnover trends. Pays attention to monthly spikes that are out of character with the year-to-date trends. Compares trends to aging movement. They should be flowing in the same direction.
b) Watches the dilution trends for any sustained increases or decreases. Does it still support the AR advance rate?
c) Looks at sales trends.
3) Reconciliation is performed, between the Lenders report, the borrowing base, the financial statements and the general ledger. If all records are not available at the same date then personnel goes back to the date when they were and reconcile.

## Inventory

1) Compares monthly totals for reasonableness. For example if sales are declining, why would inventory levels be increasing?
2) Stratifies and compares inventory by location. Are there any major shifts?
3) Stratifies manufacturing inventory by categories as raw materials, finished goods and work in process by percentages. Pays attention to any material
decreases in work process offset by a commensurate increase in either raw or finished.
4) Computes inventory turnover (Average inventory/COGS $X$ number of days in the period)
5) Computes the Cash Conversion Cycle by adding AR turnover to inventory and compares this to the prior periods to see if liquidity is improving or deteriorating.

## Accounts Payable

1) Does comparative aging spread analysis to determine the movement trends.
2) Stratifies the major vendors looking at the aging condition of key vendors and whether any new vendors appear.
3) Computes day's payable outstanding (AP/Purchases $X$ number of days in the period).

## Financial Statements

1) Looks at the liquidity ratios especially the Current Ratio (Cash + AR+ Inv/Current Liabilities). Anything too close to 1.2:1 or less expresses some severe liquidity issues. Also add the ABL perspective on looking at AR and Inv as being worth less than face value, to the equation.
2) Calculates debt-to-worth ratio looking for the any increasing debt burden.
3) Calculates EBITDA to see whether the borrower can adequately interest and debt service its obligations.
4) Calculates the asset conversion cycle (AR turn $\{$ Net AR/Net sales $X$ number of days $\}+$ Inv turn $\{$ Avg Inv/COGS X number of days $\}$ ) the same way as done using the collateral numbers. Looks at AP turn (AP/Purchases X number of days) and compares to last year to see if the company is consistent with its key vendors.
5) Finally, if the borrower is losing money then more than likely over-advances will occur creating the possibility of collateral manipulation to "create" availability.

## EXECUTIVE SUMMARY 7/15/2010

SIGNIFICANT FINDINGS

1) Slippage noted in AR spreads with balances over 60 days representing $26 \%$ at $6 / 30 / 10$ vs $21 \%$ the prior year.
2) $A R$ turn grew to 51 days vs 46 days reflecting the spread shift.
3) The reason for the slowdown is most evident in the concentration debtors which had $46 \%$ of their balances of 60 . Analyst will follow up with borrower to understand why this is so.
4) Dilution is at $2 \%$ and supports the $85 \%$ AR advance rate.
5) Inventory levels show a growth of $14.7 \%$ year over year 2010 and 2009 and out of character with AR and sales trend. Further investigation is warranted.
6) Sales trending downwards, so AR growth is a reflection of AR slowdown.
7) On the positive side, EBITDA increased to $\$ 301 \mathrm{~K}$ in 2010 vs $\$ 198 \mathrm{~K}$ in 2009

## INVENTORY CERTIFICATION REPORT

(Date Report Submitted)
Re: Report of Inventory as of

## Gentlemen:

In accordance with the terms of the Loan and Security Agreement between us dated as supplemented and amended, we herewith report on the basis of the lower of cost or market value the total inventory which is owned by us. Said inventory is free of liens, encumbrances, and security interest. Required identifying details of the inventory and methods employed by us in the computing the valuation thereof are shown below, on the reverse side, or in an attached schedule.

Unless otherwise shown on the reverse side or in an attached schedule, all inventory is located at:

## 453 Inelligent Ave
